M. Doucet,

**RE: Letter of Support in Electronic Earth's Intervention [INT.#1] of
Canadian Broadcasting Corporation [CBC] Application for Licence
Renewal CRTC Application No. 2019-0282-5**

I/we am writing you today to further demonstrate the film and television and streaming content production industries' support for the Electronic Earth intervention on CBC's licence renewal application.

Having reviewed the intervention pursued and prepared by Electronic Earth and presented by its President & Founder/Sr. Producer, Sean Young, **I (or we) agree with Electronic Earth that the removal of \$29M of Programming funding to re-purpose as non-Programming digital/alphanumeric website content as proposed by CBC would considerably damage the creative industry that CBC purports to drive.**

I (or we) further agree that the proposal made by Electronic Earth to reallocate those programming dollars to a dedicated fund to promote new and emerging talent would improve the economic landscape by overcoming existing hurdles demonstrated within the Electronic Earth intervention, and would drastically enhance the ability for truly new and emerging talent to develop opportunities for future industry successes. Implementation of this proposal would realign CBC with its mandate of being the "*... engine for the country's creative sector*".

**Signed in support of Electronic Earth INT.#1 of CBC's Licence Renewal CRTC
Application #2019-0282-5,**
